Instead of attempting to create the same object more than once, you can use the cloning tool for a faster and easier approach. The cloning tool will, as the name describes, clone your object. To create multiple copies of the same object the infinite cloner tool is useful. Instead of copying once, this tool makes it convenient to clone as many times as you want.

**CLONING ONCE**

1. Click on the object that you would like to clone.

2. Click on the drop-down arrow in the upper-right hand corner of your object.
3. Click **Clone**.

4. You should then see a second version of your object. To move this clone to a more desirable location simply click and drag the object.
INFINITE CLONING

1. Click on the object that you would like to clone more than once.

2. Click on the drop-down arrow in the upper-right hand corner of your object.
3. Click **Infinite Cloner**.

4. Click on your object a second time.

5. Then click on the infinity symbol in the upper-right hand corner of that object.
6. Click on your object and drag it to a different area of your screen. You should see that you now have two of these objects. Repeat this step to create as many copies as you would like.

7. When you have finished copying your object click on your original.

8. Click on the infinity symbol.
9. Click **Infinite Cloner**. This will turn off the infinite cloning feature so that you can freely move the objects without accidentally creating more.
