Tegrity allows the instructor to record any activity on the computer screen as well as record any lecture delivered in front of a camera (e.g. a webcam). This program can be used to enhance learning for distance, blended, and on-campus courses. Lecture recordings captured by Tegrity are archived; therefore the students can view them at any time. Students can also add bookmarks to any point of the video that they might have a question or comment about. Instructors can add bookmarks as well.

**IMPORTANT:** In order to share a Tegrity recording to users outside of the Blackboard environment, it is first necessary to Publish the recording, then modify the recording settings to allow anonymous users.

**SHARE RECORDING LINK**

1. Select video. **NOTE:** Video must already be published.

2. Click **Share Recording**.
3. Uncheck **Do not allow anonymous users to view the recording.**

Uncheck the box

Share Recording
4. You can now access the recording from the URL given. Copy and paste the URL into a browser address bar or email the link to others. Click **OK** when finished.

**NOTE:** The Embed code can be copied and pasted into the `<body></body>` tags of a web page’s HTML code. If several videos are to be shared outside of Blackboard, it is possible to embed multiple Tegrity recordings within a single web page. Then the URL for that web page can be shared with multiple people.
