Clickers are designed to allow students to electronically respond to questions posed by an instructor. Since that is the purpose of these devices it is paramount that the user knows how to perform this task.

There are several different types of questions that may be asked. The steps needed to answer each type will be explained below.

**NOTE:** Before you can attempt to answer any questions the instructor has to open polling. If this is not open you will see a message indicating that on the LCD screen of your clicker.
MULTIPLE CHOICE

Multiple choice questions are questions where only one answer is chosen among multiple options.

1. Press the number that corresponds to the option you would like to choose as the correct answer.

2. Press the silver button in the center of the arrow keys to submit your answer.
3. Once the answer has been received the LCD screen on your clicker should look like this.
FILL-IN-THE-BLANK

Text must be entered to answer fill-in-the-blank questions. The instructor will set everything up so that the appropriate screen for a text response is on your clicker. All you need to do is follow the steps below.

NOTE: If your screen does not look like the one below you need to notify the instructor. He or she will need to change a setting in their polling options.

1. Type in your answer using the buttons below. You will need to type the answer in a similar fashion as t9 texting. The answer will appear on the line shown on the LCD screen of your clicker.

2. Press the silver button in the middle of the arrow keys to submit your answer.
3. Once the answer has been successfully submitted your screen should look like this.
**NUMERIC RESPONSE**

This type of question requires an answer of more than one digit.

1. Type in the correct answer. As you type, the answer will appear on the LCD screen of your clicker.

2. Press the silver button in the center of the arrow keys to submit your answer.
3. Once the numeric answer has been successfully submitted your LCD screen should look like this.
Essay questions require text responses that are more than one word in length. There is a limit on the number of characters that can be sent for this type of response. You cannot send more than 160 characters (the length of one text message) in one response.

**NOTE:** There is a counter in the upper right-hand corner that keeps track of the number of characters you have left for that response.

Although this type of response is similar to t9 texting it is not exactly the same. You will need to press the keys a little slower than you would if you were actually sending a text message in order to arrive at the desired accuracy.

1. Type in your answer using the buttons below. You will need to type the answer in a similar fashion as t9 texting. The answer will appear in the box (as shown below) on the LCD screen of your clicker.
2. Press the silver button in the center of the arrow keys to submit your answer.

3. Once you have successfully submitted the answer the LCD screen on your clicker should look like this.
MULTIPLE RESPONSE

Multiple response questions have more than one possible answer. Multiple numbers or multiple letters may be submitted, but you cannot submit a combination of the two.

1. Type in your response using the buttons below. As you type, the answer will appear on the LCD screen of your clicker.

2. Press the silver button in the center of the arrow keys to submit your answer.
3. Once you have successfully submitted your response the LCD screen of your clicker should look like this.
