In order to use ResponseWare for a session, you will need to first create a Session ID. This is either a number randomly generated by TurningPoint for each session, or a reserved Session ID that you create for use in your class.

**CREATE SESSION ID**

1. Open TurningPoint dashboard interface.

2. Click the **Click to Connect** link in the upper-right hand corner under "ResponseWare:"

3. Type in your username and password. **IMPORTANT:** This is DIFFERENT than your Missouri S&T username and password. When you create an account at rwpoll.com, you will create a unique userid and password that is separate from your S&T userid and password.
4. Make sure the option for **Require Login** is selected. This forces students to login to ResponseWare with their own rwpoll.com account.
5. *(Optional)* Type in a Reserved Session ID. **NOTE:** It must be unique--if another Session ID exists with the same name, TurningPoint will display a dialogue box telling you so.

6. A dialog box will open showing the current Session ID. *(Optional)* Click **Get New Session ID** if you want a new random number for your Session ID.

7. Click **Close**.
