In order to use ResponseWare for a session, you will need to first create a Student Account. This is separate from your standard Missouri S&T account.

ResponseWare allows you to respond to clicker questions using your smart phone, tablet (e.g. iPad), or laptop, either through an app or by visiting http://www.rwpoll.com

**IMPORTANT:** Not all instructors will allow you to use ResponseWare! So even if you have a ResponseWare license, you may still need to purchase a physical clicker device for some of your classes. Check with your instructor about which licenses are permissible for your classes.

**LOGIN TO RESPONSEWARE VIA APP**

1. Download the ResponseWare app to your mobile device.

2. Open the ResponseWare mobile app. **NOTE:** All images below are taken from an iPhone, but the interface for Android is very similar and the same steps apply to the Android app.

3. Type in your ResponseWare userid and password. **IMPORTANT:** This may be different than your S&T userid and password, depending on how you set up your ResponseWare account.

4. Tap **Sign In.**
5. Type in the Session ID and tap **Join Session.** **NOTE:** You may have a reserved Session ID for some of your courses (e.g. MSTCALC1 for Calculus I). Your instructor will let you know what you should use for a Session ID.

6. Ensure the User ID information is correct and tap **Submit.**
7. When polling is active for a TurningPoint question, you will be able to respond to the question, as demonstrated in the image below. **NOTE:** The actual response options will vary somewhat based on the question type. In other words, a short-answer question or ordering question will be responded to differently than a “standard” multiple-choice question.
