In order to use ResponseWare for a session, you will need to first create a Student Account. This is separate from your standard Missouri S&T account.

ResponseWare allows you to respond to clicker questions using your smart phone, tablet (e.g. iPad), or laptop, either through an app or by visiting http://www.rwpoll.com

**IMPORTANT:** Not all instructors will allow you to use ResponseWare! So even if you have a ResponseWare license, you may still need to purchase a physical clicker device for some of your classes. Check with your instructor about which licenses are permissible for your classes.

**RESPOND TO QUESTIONS**

1. Login to the ResponseWare app on your device or visit http://www.rwpoll.com.

2. When polling is active for a TurningPoint question, you will be able to respond to the question, as demonstrated in the image below. **NOTE:** The actual response options will vary somewhat based on the question type. In other words, a short-answer question or ordering question will be responded to differently than a “standard” multiple-choice question.

3. As the instructor progresses through the questions, each question will become open for polling. Tap (or click, if using a laptop) the appropriate response for each question.
4. Tap **Leave** in order to exit the session.

5. Tap **Leave** again to confirm.
