Clickers are devices that allow the user to submit answers to questions posed by the instructor. The clickers correspond with a receiver to collect the user’s responses. Each receiver is set to a specific channel. If the user is utilizing the clicker for more than one course he or she might need to change the channel to match the respective receiver.

If the clicker is not set to the same channel as the receiver the answers will not be collected or recorded. To ensure this does not happen follow the instructions below for information on how to successfully change the channel on your XR clicker.

1. Press **MENU**. You will need to press **MENU** until your screen matches the one shown below. You may have to press this button several times depending on which screen your clicker is currently at.
2. Press the down arrow key, labeled **YES**, until **Change Channel** is highlighted.

3. Press **Enter** to select this item.
NOTE: The words “Change Channel” will briefly appear on the screen of your clicker.

4. The screen will then show the current channel and prompt you to enter the new channel number. Your instructor will inform you which channel the clicker is supposed to be set at. If that number matches the current channel press MENU.

NOTE: The default channel for clicker-enabled classrooms is 41.
5. If the channel numbers did not match, use the number pad to type in the correct answer. Then, press Enter.

6. If the channel you have typed in matches a receiver within range of your clicker the words “Receiver Found” will appear on the screen of your clicker.
7. If there was a problem finding the channel, the ResponseCard will momentarily indicate that it cannot find the receiver.

8. After reporting that the receiver cannot be found, you will be asked if you would like to type in a different channel. Press YES to repeat the channel entry process.
9. After the clicker has successfully found a receiver, it will enter into Presentation Mode. This means that you will be able to submit answers once your instructor has opened polling.
